LEARNING OBJECTIVE

After participating in this symposium, you should be able to:

- Explain why a multidisciplinary approach is critical to the successful management of patients with AL amyloidosis

Dear Colleague

We are pleased to invite you to the Janssen-sponsored satellite symposium entitled 'Navigating the patient journey in AL amyloidosis: a multidisciplinary approach', which is being held during the International Symposium on Amyloidosis.

Immunoglobulin light chain (AL) amyloidosis is the most common systemic amyloidosis. Early and accurate diagnosis is the key to effective management, although this can be challenging. In this symposium we will describe how to optimize the diagnosis and risk assessment of AL amyloidosis in clinical practice with the support of a multidisciplinary team.

Modern treatments have improved the outcomes for many patients diagnosed with AL amyloidosis. In this symposium, we will evaluate current treatment options and discuss the multidisciplinary team approach to the interpretation of clinical trial results for daily clinical practice.

On behalf of the faculty, we thank you for reserving time for this symposium and hope you will enjoy what promises to be a stimulating and educational program.

Yours sincerely

Professor
Marianna Fontana

Professor
Giovanni Palladini

SCIENTIFIC COMMITTEE

Program

Duration	Topic	Speaker
5 minutes	Welcome and introduction	G Palladini
20 minutes	Diagnostic pitfalls and risk stratification in AL amyloidosis	M Fontana
20 minutes	Panel discussion	All faculty, moderated by G Palladini
20 minutes	Key considerations when selecting treatment for patients with AL amyloidosis	G Palladini
20 minutes	Panel discussion	All faculty, moderated by M Fontana
5 minutes	Summary and close	G Palladini
